## PROFILE

Offensive security researcher specialising in web application, API and mobile penetration testing. Delivered 50+ client VAPT engagements covering SQL injection, remote code execution, authentication bypass and broken access control, with findings rated up to CVSS 9.8. Bug bounty hunter since 2022, currently ranked **#250 globally on Intigriti**, with 100+ applications secured through responsible disclosure and rewarded findings at Samsung, Bambu Lab, Red Bull, Flipdish and Qwilr. Strengths in broken access control, business logic abuse, authentication and privilege escalation. Additional experience in smart contract auditing (Solidity and Move).

## EXPERIENCE

**Security Analyst** Mar 2024 – Mar 2026  
*EncodersPro Pvt Ltd*

- Delivered **50+ client security assessments** across web applications, APIs, mobile applications and infrastructure, simulating real-world attack scenarios end to end.
- Identified critical and high severity issues including SQL injection, remote code execution, authentication bypass and broken access control.
- Risk-rated every finding and wrote remediation guidance aimed at the engineering stakeholders responsible for the fix.
- Produced full VAPT reports covering reproduction steps, impact analysis and remediation; ran retests to confirm closure.

**Independent Security Researcher — Bug Bounty** 2022 – Present  
*Intigriti · YesWeHack · Private Programs*

- Ranked **#250 globally on Intigriti**; active on YesWeHack and invite-only private programs.
- Focus on high-impact classes: account takeover, IDOR and BOLA, broken access control, privilege escalation, business logic and payment flaws, authentication and OTP abuse.
- Reported against enterprise staging and production environments, including financial-period locking bypasses and unauthorised record deletion in accounting SaaS.
- Reports include reproduction steps, raw HTTP requests, PoC video and remediation guidance — commended by program owners for clarity and impact analysis.

**Junior Security Analyst** May – Aug 2025  
*Strobes Security*

- Tested web applications, APIs and infrastructure using manual techniques supported by Burp Suite, Nmap, Nessus, OWASP ZAP and Metasploit.
- Applied OWASP Top 10 and API Top 10 to assessment, threat modelling and remediation advice.

**Bug Bounty Instructor — Guest Session** 2025  
*Amroha Police · Cyber Security Internship Programme*

- Delivered a training session on bug bounty methodology covering recon, vulnerability discovery, report writing and responsible disclosure.

**Smart Contract Security Auditor** 2025 – Present  
*Kann Audits · Cantina · Code4rena · Sherlock*

- Kann Audits: 15+ accepted findings across critical, high and medium severity on private client audits, spanning Solidity and Move — including one critical in a Move contract.
- Cantina — Revert Finance: 4th place. Code4rena: accepted findings on GTE Perps, MegaPot and SukuFi.

## ACHIEVEMENTS

|                       |                                                                                 |
|-----------------------|---------------------------------------------------------------------------------|
| Bambu Lab             | Full account takeover — rewarded                                                |
| Samsung               | Security vulnerability disclosure — rewarded, assigned SVE-2025-50058           |
| Adobe ColdFusion host | Unauthenticated file upload to RCE — CVSS 9.8, coordinated disclosure, resolved |
| Qwilr                 | Insecure Direct Object Reference (IDOR) — rewarded                              |
| Flipdish              | Response manipulation vulnerability — rewarded                                  |
| Red Bull              | Responsible disclosure — rewarded and recognised                                |
| Intigriti             | Top contributor: Webnode, PDQ, Leapsome, InnoGames, Veriff                      |

## TECHNICAL SKILLS

|                     |                                                                                                                                                                                     |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Web & API Security  | OWASP Top 10, OWASP API Top 10, broken access control / IDOR / BFLA, business logic abuse, authentication & session flaws, SQL injection, RCE, SSRF, XSS, rate limiting & OTP abuse |
| Offensive Tooling   | Burp Suite Pro, Nmap, Nessus, OWASP ZAP, Metasploit, ffuf, custom recon & fuzzing workflows                                                                                         |
| Engagement Delivery | VAPT scoping and execution, security report writing, risk rating, retesting, remediation guidance                                                                                   |
| Mobile Security     | Android application penetration testing, static & dynamic analysis, OWASP MASVS / Mobile Top 10, automated mobile security assessment                                               |
| Other               | Linux/Windows administration, Python, C, HTML/CSS                                                                                                                                   |
| Web3 (secondary)    | Solidity, Move, manual contract review, Foundry, Slither, Echidna, Hardhat                                                                                                          |

## CERTIFICATIONS

Certified Red Team Expert (CRTE) · Certified Network Security Professional (CNSP) · Certified AppSec Practitioner (CAP) · API Penetration Testing (APIsec University) · Automated Mobile Application Security Assessment

## EDUCATION

**MCA** — Shri Krishna University, Chhatarpur (2025 – Present)  
**BCA, Cyber Security** — Poornima University, Jaipur (2021 – 2024)
